Project Title:

AFRITECH ELECTRONICS:

Navigating Digital Reputation

Project Done By:

Timothy Kuranga

Data Analyst

BUSINESS OVERVIEW

AfriTech is a consumer electronics brand specializing in smartphones, tablets, and wearables with 200 employees and $2M revenue in 2022.

Value-conscious tech adopters across multiple U.S regions; seeking reliable hardware and prompt support.

AfriTech have steadily built a reputation for quality and reliability, carving out a niche in a highly competitive global market.

PROBLEM STATEMENT

- **Negative Social Media Buzz**
  Surge in critical posts about product reliability and customer service denting brand sentiment and reach.

- **Customer Complaints**
  Rising defect, billing, and support complaints with slow first responses deepening frustration.

- **Product Recalls**
  Recent product recalls have received significant media attention, causing panic among customers and stakeholders.

- **Competitive Pressure**
  Rivals are gaining market share by exploiting AfriTech Electronics Ltd.'s reputation challenges.

PROJECT AIM

To restore and strengthen AfriTech Electronics' digital reputation by turning social media challenges into strategic opportunities through data-driven brand monitoring, faster customer response, and structured crisis/recall management, ultimately improving trust, conversion, and retention.

PROJECT OBJECTIVES

Establish a digital reputation baseline by measuring current brand sentiment, reach, share of voice, and top complaint themes across social media, reviews, and media coverage (with special focus on reliability, billing, and support).

Implement always-on brand monitoring and alerting to detect negative buzz spikes early (e.g., recall mentions, defect reports, influencer posts), including clear thresholds and an escalation workflow.

Diagnose root causes behind negative narratives by linking online complaints to internal categories (product defects, billing issues, warranty/returns, service delays) and identifying the highest-impact drivers of churn and sentiment decline.

Improve customer experience response performance by redesigning social media support handling to reduce slow first responses, standardize tone, and increase first contact resolution for high frequency issues.

Create and deploy a recall crisis management playbook outlining messaging, FAQs, customer guidance, stakeholder communication, and post-incident recovery steps to reduce panic and misinformation.

PROJECT OBJECTIVES

Counter competitive pressure with proactive trust-building content (quality assurance transparency, support improvements, recall updates, product tips) to shift conversation from negative narratives to solutions and reliability.
Track outcomes with clear KPIs tied to business impact: sentiment improvement, response time reduction, complaint volume trends, conversion rate recovery, churn reduction, and customer lifetime value stabilization.

KPIs AND METRICS

Customers Analysis

- There are 200 customers spread across 49 regions with an average age of 44 years.
- 48 (young) customers are below the age of 22, constituting 24% of the total Afritech's customers, 80 (adult) customers are between 22 and 49, constituting 40% of the total Afritech's customers, 72 (old) customers are between 50 and above, constituting 36% of the total Afritech's customers.
- The customers with most revenue generation for Afritech are the VIP and the returning customers.
- Top 5 customers with most revenue generation for Afritech are listed below:

Customer Name	Average Purchase Amount
1. Diana Brown	$1,957.99
2. Richard Bowman	$1,875.60.
3. Monica Weaver	$1,789.40
4. Michael Anderson	$1,606.12
5. Daniel Williams	$1,521.42

KPIs AND METRICS

The VIP and the returning customers gave the most negative sentiments; 47.7% from the returning customers and 43% from the VIP customers while just 9.3% coming from the new customers.

TRANSACTION ANALYSIS

73586 products were purchased by customers, generating a total revenue of $57.53m. $19.4m generated in 2021,
18.2m generated in 2022 and $19.9m in 2023.
37459 (50.91%) products were recalled by Afritech which resulted to loss of $28.09m in revenue.
Returning customer made the most product recall with 18600 products.

SOCIAL MEDIA ANALYSIS

There 292 million of customer engagements on social media.
CSAT score is 41.01%
Resolution rate is 47.6%
Afritech's average response time is 189 days.
NPS response analysis highlights that 64.6% of customers are not satisfied with Afritech, 18% are very satisfied while 17% are satisfied.

RECOMMENDATION

Afritech' s critical issues

Response time(189 days) – extremely high

Product Recall (50%) – very high

Resolution rate (47.6%) – very high

Tackling these three very critical issues will increase customer retention, improve brand reputation and stabilize revenue growth.

The VIPs who generate the most revenue for the company are the ones who gave the most negative complaints; therefore, a VIP retention program should be launched, that can help resolve their issues urgently.

Target satisfaction survey should be conducted for VIP and returning customers to identify their pain points.

Implement stricter quality control and supplier audit

Investigation should be carried out whether the customers are abusing the return policies.

The average response time of 189 days is extremely high and therefore should be reduce by introducing AI chatbots and live chat support to their website(s) that can promptly attend to customers' queries.

More investigation should be carried out on the reason why there is a decline in revenue in 2022

RECOMMENDATION

Afritech boasts of 292 million of customers' engagements on all their social media platforms, this suggests high brand exposure, hence, the social media platforms should be used as customers recovery channels.

A dedicated social media team should be set up to publicly resolve customers' complaints; this will improve the brand perception.

EXPECTED OUTCOME

If the recommendations are implemented, Afritech will:

- **Improve customer retention**

Increase retention rate by 35%.
Reduce churn rate 15%

- **Improve brand reputation**

Improve first response time by 75%
Reduce negative social media sentiment by 20%

- **Stabilize revenue**

Reduce revenue volatility by 32%
Increase repeat purchase by 15%

THANK YOU
